

GIORGI KUTATELADZE

g.kutateli@gmail.com – Georgia – My Portfolio

SKILLS

- Skills: Javascript, Typescript, Angular, Next.js, React, React-Native, Express, Nest.js, NgRx, Redux, MySQL, MongoDB, Firebase, Git/GitHub, CSS/HTML/SASS, TailwindCSS, Experience with: Python, PHP

SUMMARY

About me and portfolio

My Portfolio

I fearlessly embrace new languages and tools thanks to my solid grasp of the fundamentals. Beyond the experiences mentioned down below, I've completed numerous projects showcased on my portfolio website. Additionally, I've collaborated with fellow developers and contributed to various projects, some of which are on my: GitHub

EXPERIENCE

TechFleet

2023 – to this day

Junior Developer For Ruminant Project

- The Ruminant Project connects product producers with evaluators in the farming community, enhancing organic produce assessment.
- Implemented authentication with email and GoogleAuth, and designed a schema for evaluators.
- Conducted frequent meetings with clients, product, and design teams, enhancing soft skills through sprint planning and project feasibility assessments..

Ieworx start-up

ieworx.app

2023 – 2023 Full-stack Developer

- Developing a SaaS application to help construction entrepreneurs with tax and legal invoices.
- Created a Next.js-based navigation bar and contact form for the start-up's website.
- Initially responsible for an Express.js backend for the main project, but production halted until February 2024.
- Collaborated for a month and a half with the product owner, gaining valuable team experience.

Chingu

Dev-connect

Full-Stack Developer

- I was a participant in Chingu's Voyage 46, where we started working on Upwork clone, Developed a Rest API using Express.js and TypeScript, integrating live chat and notifications via Socket.io, linking it to the React front end.
- Implemented JWT-token-based authentication on React, utilizing cookie storage for efficient data persistence and employing the Context API for seamless user data sharing, Created a sophisticated MongoDB schema with distinct roles for companies and developers, featuring functionalities like CV reception and a review system.
- Assumed a leadership role, hosted the front end on Netlify and back end on Render.com, adeptly managing merge issues on GitHub, and acquired professional Git proficiency.

Optio.ai

Banner Manager

Angular

- This project was my first experience with Angular, challenge was made by company Optio, Leveraged OOP expertise from Nest.js and PHP, swiftly grasped Angular fundamentals in a day, aided by prior knowledge of Redux, facilitating NgRx state management.
- Received Swagger documentation for a banner management system, implemented nine CRUD endpoints using NgRx effects, and enhanced UI with Angular Material styling. Addressed additional requirements: maintained filter state post-reload, implemented NgRx for state management, created a comprehensive README with a detailed project video, and included basic unit tests for quality assurance.
